HOME/BUSINESS ALARMS - WIRED

HKC Hybrid Technology

The "HKC 1070 Hybrid Panel" give you more flexibility than any other Alarm system on the market.

The System allows you to use "Wired" equipment and "Wireless" equipment at the same time. This is extremely handy for example, if you have had your house wired for an Alarm at Construction stage by your Electrician, but you have since built on an Extension/Sunroom or Conservatory. You can now use the "Wired" equipment, and use "wireless" where you have no attic space or where you have finished decorating.

Equipment - Detectors supported: PIR (motion detectors) glass-break, flood, smoke and gas detectors; door/window magnetic contact, etc

Monitoring - Give yourself the added peace of mind by having your Alarm connected to a Monitoring Station, at only €15-38 per month you know someone is monitoring your house Alarm 24/7, in the event of an activation on your Alarm, someone will ring you directly and if need be contact the Gardai on your behalf.

Maintenance - Let us look after your Alarm for a small fee (POA) and we will give you your Annual Service, look after any issues, cover all Service calls and even change your batteries when needed.

ALARM EQUIPMENT EXPLAINED

Motion Detector - also called a P.I.R. (Passive Infra Red), These create invisible infra red beams, once they are broken by motion, they trigger the Alarm

Door & Window contacts - These ensure windows and doors are closed before arming

Door & Window Sensors - Picks up vibration on Windows/Doors caused by persons trying to gain access

External Siren - Creates an audible and Visual deterrent outside your home. This works together with an internal siren which is located inside your home.

Keyfobs - Turn on or off the system with minimal fuss, single button operations.

Other equipment available - Panic Buttons, Carbon Monoxide Detectors, Smoke alarms, flood Detectors etc...
